### **Indispensable tool for every modeller**

The new GRAUPNER SERVO-FINDER is an indispensable software tool for every modeller, available free of charge. With the new DES and BS servos our current range has now expanded to embrace 93 different types. The SERVO-FINDER program has been developed in order to make it as easy as possible to select the correct servo for you.

The basic servo type you need (analogue, digital, brushless or digital eco) is selected simply by clicking. You then feed the software the specifications you require, i.e. maximum case width, minimum power and minimum speed. In seconds the program displays a summary of all the servos which meet your criteria. If you have an active Internet connection, it is then even possible to call up comprehensive product information simply by clicking on the corresponding servo.

**For more information and to obtain the free GRAUPNER SERVO-FINDER software please visit the Graupner website without delay: [www.graupner.com](http://www.graupner.com).**
