

## Press release

Friday, 26 February 2010

### **ELEKTRO-ROOKIE S | new product for 2010 now available with visualised building instructions**

The ELEKTRO-ROOKIE S, Order No. 4218, is one of our new products for 2010. It consists of GRAUPNER Solidpor® high-density foam components, and is available with immediate effect from model shops. The Rookie S forms the perfect beginner's model, with its robust design, its superbly docile flying qualities and the high-performance, low-maintenance brushless motor included in the kit. Its two-part wings (with CFRP spar) and removable tailplane ensure compact dimensions for transport purposes. The model is controlled using the RC functions rudder, elevator and throttle. A set of visualised building instructions can be called up at our website at no cost. For more information about the new GRAUPNER ROOKIE S please refer to our current 2010 New Items catalogue, which you can obtain from any model shop; it is also available from [www.graupner.de](http://www.graupner.de) for downloading.
